

I am opposed to BPL because of the interference it would cause to Short Wave radio communications. I am a ham radio operator, and I enjoy communicating with others and listening to news from other countries on those frequencies. Neither one would be possible with the level of interference that would BPL would cause.

I live in a rural area that would be a prime market for BPL, and if it weren't for that interference, I would not only be in favor of BPL, but (if the price were right) would be first on the list to have it installed. But much like noise and light pollution, the non-monetary price is too high to justify the service.
